e-**M**SLIM RF
Body Sculpt Machine

2 HANDLES

- Muscle build
- Weight loss

Overview

Muscles account for about 35% of the body, and most slimming devices on the market only focused on fat but not muscles. While currently only injections and surgery are used to improve the shape of the buttocks. In contrast, e-MSLIM RF body sculpt device, which uses the most advanced (HIFEM) high intensity focused magnetic vibration technology, directly stimulates motor neurons, so that the body's muscles continue to expand and contract. This kind of contraction cannot be achieved by your usual exercise or fit exercise. The energy pulse of 30 minutes treatment can stimulate 30000 strong muscle contractions which help the fat cells to metabolize and decompose vigorously.

e-MSLIM RF helps you easily gain muscle and reduce fat with remarkable results

The e-MSLIM RF Body Sculpt Device has two treatment handles, and supports two handles to work synchronously; it can be operated by two people at the same time, and can be placed on the abdomen, buttocks, upper arms, thighs, etc. individually or at the same time.

For those who want to quickly lose fat and increase muscle or change their body shape, it is an innovative reform device for postpartum women who can achieve postpartum abdominal muscle vest line, peach buttocks, and rectus abdominis separation.

- The device is non-invasive, safe and painless, no radiation, no side effects, no need for anesthesia, you can be thin when lying down, it can tighten muscles and lose weight, there is no discomfort during the treatment, and there is no need for a recovery period after the treatment.

How the **e-MSLIM RF** Body Sculpt Device Works

The e-MSLIM RF Body Sculpt Device adopts non-invasive HIFEM technology, releases high-frequency magnetic vibration energy through two large physiotherapy handles, can penetrate the muscle to a depth of 8cm, realize high-frequency extreme training, deepen the growth of myofibrils (muscle enlargement) and generate new collagen chains and muscle fibers (muscle hyperplasia).

Prestige 100% limit muscle contraction of the technology can lead to a large amount of fat decomposition, fatty acids from the decomposition of triglyceride outflow, a large amount of accumulation in adipocytes. Fat acidity is too high, fat cells apoptosis, in a few weeks by the body's normal metabolism out of the body.

It is **important** to choose the **right method** to **lose weight**

- Choosing a relaxed and professional way to build muscle and burn fat without harming your health. Choice is more important than effort!
- Focused magnetic resonance (HIFEM) technology helps you gain muscle and lose fat easily.

- There is no need for hard exercise, no pain, no sweat, no need to take off clothes, and it is more time-saving and labor-saving.
- You only need to lie down for 30 minutes = 30000 times of muscle contraction (30 minutes of abdominal / hip treatment, equivalent to 30000 times of sit ups / squats), so that you can easily lie down to build muscles and reduce fat.

How long will a course of treatment take? How long will it take effect?

4 times for a course of treatment, interval 2-3 days to do once, generally open a card set 6-8 courses of treatment, which can get good results.

The best results are in the 2-4 weeks after the treatment.

To break down fat and increase muscle mass, patients need to be patient.

Usually after 4-6 treatments, muscle mass increases by approximately 16% and fat can be reduced by 19%.

Equipment Advantages of e-MSLIM RF Body Sculpt Device

What are the advantages of the device?

- Two treatment handles, dual channel control energy, support two handle synchronous work; it can operate two persons at the same time, suitable for men and women.
- It's safe and non-invasive, non-current, non-hyperthermia, and non-radiation, and no recovery period.
- No knife, no injection, no medicine, no exercise, no diet, just lying down can burn fat and build muscle, and reshape the beauty of lines.
- Saving time and effort, only lying down for 30 minutes = 30000 muscle contractions equivalent to 30000 belly rolls / squats).
- Simple operation, strap type, no operator needed.
- There are sufficient experimental studies to prove that the treatment effect is remarkable. It only takes 4 treatments within two weeks, and every half an hour, you can see the effect of reshaping the lines in the treatment site.

Body-building

Hard-work,time-consuming,
it's difficult to persist.

Liposuction

High risk, such as wound infection

Drugs/alternative foods

Have side effects, may cause diarrhea,
damage the organs, and easily rebound

Vegetarian food

Malnutrition, leading to
dizziness and decreased
resistance.

Methods of building Muscle & burning fat

e-MSLIM RF Body Sculpt device

- Medical research has proved that after completing a course of treatment, e-MSLIM RF Body Sculpt device can effectively increase muscle by 16% and reduce fat by 19% at the same time. It presents the beautiful lines of waist- coat line, mermaid line and peach hip.
- Improving the abdominal muscles that have become loose due to separation of rectus abdominis, and shaping the vest line. It is especially suitable for mothers who have increased belly circumference and loose belly due to the separation of rectus abdominis after childbirth, returning to a girlish posture.
- Exercise strengthens the core muscle group, including the abdominal muscles of the large core group (rectus abdominis, external oblique muscle, internal oblique muscle, transverse abdominal muscle) and gluteus major muscle in the small core group. The core muscle group can protect the spine, maintain the stability of trunk, maintain the correct posture, improve the athletic ability and reduce the chance of injury, provide structural support for the whole body, and shape a healthy young body.

Exersizing the abdominal muscles to shape the vest line.

Exersizing the buttock muscles to shape the peach buttocks.

Exercizing the oblique muscles in the abdomen to shape the mermaid line

HIFEM technology

Improving separation of Rectus Abdominis

It may not be normal to have "mother belly" after childbirth!

As many as 60% of mothers have rectus abdominis separation after childbirth. After childbirth, there will be lower abdomen sagging, fat, protruding belly, lack of abdominal muscle strength, often accompanied by low back pain, lumbar muscle strain and other problems.

Once the rectus abdominis is separated, the traditional abdominal curling exercise will only make the abdominal muscles more open. However, the suture of rectus abdominis through cesarean section is not a good strategy because of its great trauma and slow recovery.

Prestige Shape is the perfect solution

Only Prestige Shape brings non-invasive technology to postpartum women and solves the separation of rectus abdominis for many mothers. The latest MRI and CT computed tomography medical research confirmed that after the e-MSLIM RF Body Sculpt treatment, the separation of rectus abdominis was reduced by an average of 11%, while fat loss was reduced by 19% and muscle growth was 16%. It is the perfect solution for mothers to lose weight and maintain health after delivery.

Separation of rectus abdominis:

MRI :

e-MSLIM RF Body Sculpt Device technology drive mode

- Use 6 different frequency combination modes to ensure the highest clinical efficacy.
- Step-type exercise plan, energy-converging frequency exercise, to provide gradual exercise for your muscles.

- Stretching and warm-up: the rhythm is gentle to drive the muscles to stretch, so that the muscles warm up and promote blood circulation.
- Deepen exercise: gradually accelerate the rhythm to exercise muscles, stimulate a large number of deep muscle fibers to participate in the force.
- Activate muscles: gradually speed up the rhythm and intensity, activate muscle fiber contraction and force, and regain muscle vitality
- Strengthen muscle gain: Speed up the rhythm and perform powerful and intense muscle contraction exercises to stimulate high-speed contraction of deep muscles.– Improve muscle density and increase muscle strength.
- Strong fat burning: Gradually increase the load, make the resistance muscle contraction, enhance the microcirculation in the body, and accelerate the burning of fat into energy consumption.
- Relief: slower rhythm drives muscle contraction and relaxes muscle fatigue.

MATTERS NEEDING ATTENTION

1. Don't operate head, neck/carotid artery, wealth bag position, or near the thoracic gallery.
2. The two handles cannot work against each other.
3. The healer should not carry any metal objects.
4. Don't be full during treatment, and treat at least 1 hour after meals.
5. The operation site and treatment probe should be dry without water.
6. The operating energy varies from person to person and increases gradually from low energy.
7. The total operating time of a day does not exceed 1.5 hours, and one part does not exceed 1 hour.
8. Do not put any electronic products or metal objects on the instrument during operation.
9. Don't eat or enter water during operation.
10. After the end of the operation, try to eat again after 1 hour (drink more water and eat food with high protein content).
11. Those people with the following conditions cannot receive treatment.

TECHNICAL SPECIFICATIONS

Magnetic vibration intensity	7 Tesla
Input voltage	AC110V-230V
Output power	300W-4000W3
Output power	-150HZ
Fuse	20A

• Easy to get in shape without exercise
